PitchForce Feedback – Brightwell Diagnostics

SAMPLE — Synthetic Life Science Virtual PitchForce · September 17, 2026

Company: Brightwell Diagnostics

Presenter: Ana Silva

Event: SAMPLE — Synthetic Life Science Virtual PitchForce

Date: September 17, 2026

SAMPLE REPORT — synthetic data for demonstration only.

Result and score

Total score: 18 / 30 — 5 judges scored (sum 15). 1 judge was absent; under the event's scoring rule the average of the submitted scores (3) was added for that seat.

Overall assessment

Ana Silva presented Brightwell Diagnostics in a pitch of about 4m 43s, followed by 3 investor questions and feedback from 5 panelists. The panel's comments centered on slide design and density, timeline and use of funds and market and go-to-market. 1 question was left partly open, which gives you a natural reason to follow up with a clear written answer. Statements in the pitch about regulatory status, results, IP, funding, or projections are reported here as your claims; investors will expect documentation for each.

In the event poll, 3 people responded: 1 respondent chose “interested in investing”; 2 respondents chose “wants a meeting”; 1 respondent chose “needs more information”; 1 respondent chose “offers an introduction”; 1 said they were not interested. Investor and audience follow-up details are in the attached spreadsheet.

What worked

- **Jordan Avery** (15:08:06): I love the problem and the speed of the test is compelling.
- **Priya Nair** (15:08:28): The opening update was strong.
- **Lena Ortiz** (15:08:56): Clear presentation.

Key investor questions and open points

- **How many patients do you need in the pivotal study? / What does it cost?** — Priya Nair, 15:06:20. Answered: “About four hundred patients across three sites, and we estimate about one point eight million of the raise goes to the study.”
- **Who pays for the test, the hospital? / Is there a reimbursement code?** — Tom Becker, 15:06:57. Partly answered: “The hospital pays per cartridge.” Open point: The presenter indicated this is not yet settled (“still evaluating”).
- **What price per cartridge are you assuming?** — Tom Becker, 15:07:32. Answered: “Around ninety dollars per test, which is in line with existing sepsis panels.”

Top three improvement priorities

1. Slide design and density

What came up: Jordan Avery — “You should tighten the market slide and lead with the clinical outcome” (panel comment; the deck itself was not reviewed by this report).

Why it matters to investors: Dense slides compete with you for attention; panelists skim instead of listening.

What to change: Cut each slide to one message, with fewer words and larger visuals; move detail to an appendix.

A stronger version: Slides a non-specialist can read in five seconds each, supporting what you say rather than repeating it.

Evidence: 15:08:06 (event clock)

2. Timeline and use of funds

What came up: Priya Nair — “I would suggest showing the study timeline next to the spending so we can see how capital converts to milestones”.

Why it matters to investors: Investors fund milestones, not activities. Seeing what each tranche of capital buys, and when, is how they judge whether the raise is sized correctly.

What to change: Put the milestone timeline and the spending plan on one slide, so each milestone shows its cost and date.

A stronger version: A one-page plan: “$X funds A by month 6, B by month 12; that de-risks C for the next round.”

Evidence: 15:08:28 (event clock)

3. Market and go-to-market

What came up: Lena Ortiz — “Make sure the reimbursement path is explained, because that will decide adoption”.

Why it matters to investors: Investors need to believe a specific customer will buy, at a price that supports the business.

What to change: Name the first customer segment, the buyer, and the price point, with one proof point.

A stronger version: A bottom-up market slide grounded in real customer conversations.

Evidence: 15:08:56 (event clock)

Best practices for your follow-up

A few practices from EcoVG's presenting-company guidance that apply to your follow-up:

- Keep the pitch clear, concise, and understandable to non-specialists.
- After a virtual event, suggest a short follow-up video call rather than an in-person meeting.
- Use each expression of interest to set a specific next step, such as a scheduled call.
- Send requested information promptly.

- You own your investor relationships and follow-up. EcoVG facilitates events, introductions, and feedback, but does not guarantee responses, meetings, or investments.

Upcoming EcoVG learning opportunities

We did not find an upcoming EcoVG session closely related to your feedback when this report was prepared. See the official calendar for new sessions: https://events.ecovg.com/events

Optional advisory support

If you would like hands-on support turning this feedback into a clearer pitch and a funding plan investors can underwrite, EcoVG offers paid advisory services (Investor Presentation Strategy and Capitalization & Capital Planning): https://ecovg.com/entrepreneur-services/. This is optional and separate from PitchForce judging; it does not affect scores, introductions, or funding outcomes.
